Note: *Spacing for specific radii not shown may be interpolated from the table and rounded to the nearest meter. The minimum spacing should not be less than 6 m or greater than 90 m. The spacing of the first delineator approaching a curve should be placed at 2S, the second 3S, and the third 6S, but the distance should not exceed 90 m. S refers to the delineator spacing for specific radii computed from the formula* $S = 1.7 \sqrt{R - 15}$.
